DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5, 12-13, 48-51, 53-56 and 59-60 are rejected under 35 U.S.C. 102(b) as being anticipated by Boddie (US Pat#4,192,302).

Glickman discloses a system for fluid isolation in a biological mass having an upstream channel and a downstream channel. The system includes a delivery occlusion conduit that is positioned adjacent the upstream channel, a collection conduit with at least one balloon that is positioned adjacent the downstream channel. The perfusion fluid is pumped through the delivery conduit and reclaimed by the collection conduit. The fluid may be a chemotherapeutic agent. The collection conduit has at least three lumens that are used for-fluid collection, a guidewire and balloon inflation.

The device is capable of being used during a substantial period of diastole and/or the period of systole.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 3763

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 6-8, 52 and 57-58 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bodie.

Bodie meets the claim limitations as described above but fails to include the occlusion mechanism of the aortic occlusion catheter being an elastomeric balloon and the catheter having three lumens.

At the time of the invention, it would have been obvious to incorporate a balloon as the method of occlusion for the aortic occlusion catheter since balloons are well known in the catheter art to effectively, less-invasively and safely occlude blood vessels. The motivation for making the incorporation would have been in order to provide an occluding device that enhanced the safety to the patient by using a less invasive mechanism.

At the time of the invention, it would have been obvious to incorporate two additional lumens into the aortic occlusion catheter since the reference itself teaches a multi-lumen catheter (i.e. the collection conduit (9)) that has fluid, guidewire and inflation lumens. Having these three lumens in one catheter is common in the art since a balloon catheter if being used to transfer fluids will necessitate at least two lumens (i.e. one for fluid and one to inflate the balloon). Additionally, the procedure of using a guidewire to introduce a catheter into the body is also well known in the art and standard practice to ensure proper and safe placement of the device. The motivation for incorporating an inflation lumen and a guidewire lumen would have been to enable the use of a balloon (see paragraph above) and a guidewire thereby providing a device that has been enhanced for safety of the patient during placement and use.

Claims 10-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bodie.

Art Unit: 3763

Bodie meets the claim limitations as described above but fails to include the biological mass being the human heart. At the time of the invention, it would have been obvious to use the invention of Bodie to isolate and perfuse the human heart during procedures such as bypass.

Response to Arguments

Applicant's arguments with respect to claims 1-13 have been considered but are moot in view of the new ground(s) of rejection.

Allowable Subject Matter

Claim 9 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Catherine S. Williams whose telephone number is 703-308-4846. The examiner can normally be reached on Monday - Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Casler can be reached on 703-308-3552. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9302 for regular communications and 703-872-9303 for After Final communications.
